ABOUT COURSE

Tableau Developer

Tableau is one of the most powerful and fastest growing tools for data visualization and used in the Business Intelligence sector.

Tableau helps in simplifying raw data very smartly to make different visuals, easy to understand, based on customer need. Tableau helps to create the report with multiway-dimensions, that can be analyzed by professionals at any level in an organization.

Tableau is very easy to learn and work with, even for non-technical users, and this course, which is designed with step-by-step lessons for related topics, is a good example of how anybody could opt for this course. Tableau Developer can do data analysis from the basic to the advanced level: data visualization, business intelligence, data digging, business analytics, customized dashboards, stories, animation, and different ways of analyzing the data.
